Aircraft Radar FAQ

Tracker Plus · planes flying near you, live

In one line: a live radar of every plane within about 46 miles (40 nautical miles) of your home. Tap a plane to see where it is going.

The radar

FIND a flight

What am I looking at?

You are in the middle of the radar. Each little plane is a real plane, pointing the way it is flying. The panel on the right shows the plane you picked: flight number, type of aircraft, height, speed and how far away it is.

How do I pick a plane?

Tap it on the radar, or tap **Next** to go from one to the next.

How do I find a particular flight?

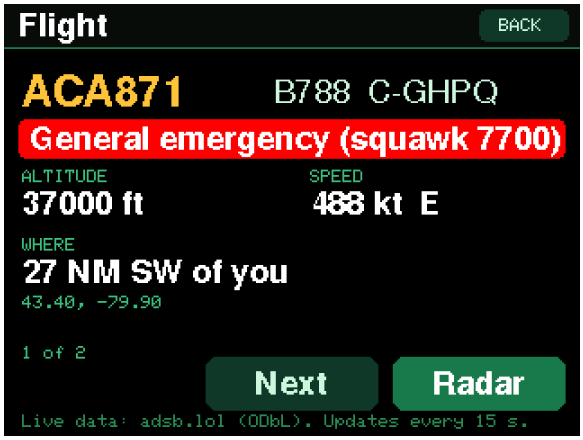

Tap **FIND** and type the flight number, for example ACA871. If the flight is in the air, you see where it is.

What is ALERTS?

Tap **ALERTS** to see emergencies anywhere in the world. When a plane sends an emergency signal (7700 general emergency, 7600 radio failure or 7500 hijack), the unit can show **SOS!** in red. These are rare. Many turn out to be small problems.

Worldwide emergencies

A flight in detail

Why are there no planes?

Quiet area or a quiet hour. Wait a moment. Check your town in Settings > Location. The radar uses your town as the centre.

Are these the planes really overhead right now?

Yes. They come from a network of volunteer receivers (adsb.lol). A plane can be missing if no receiver can see it.

Why are some planes missing a flight number?

Some planes, such as small private ones, do not send one.

How do I go Home?

Tap the blue **HOME** button at the top right (or **Home** at the bottom right).

Does it cost anything?

No. The flight data is free and there is nothing to pay each month.

Need more help?

Open the full Tracker Plus guide from Settings > Help & info (scan the QR code), or contact the seller and tell them the version in Settings > Help & info.

Aircraft, ships, news, weather and other live data come from free third-party services. Their availability, speed and accuracy can change at any time, so live data features cannot be guaranteed.
