# Sky & Space FAQ

Tracker Plus · what is going on above your head

**In one line:** Sky & Space shows what to look for tonight, the aurora chance, rocket launches, the planets and when the space station passes over you.

Tonight

Rockets

## How do I move between pages?

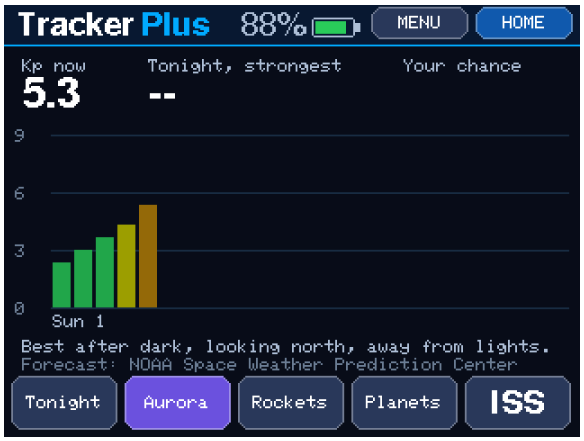

Tap the tabs along the bottom: **Tonight**, **Aurora**, **Rockets**, **Planets**, **ISS**.

## Why is it showing the wrong sky?

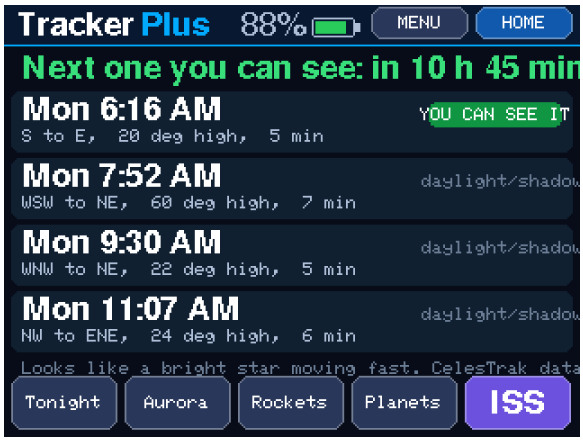

Sky and Space uses your town. Go to Settings > Location and set your town again.

## What is on the Aurora page?

Your chance of seeing the northern lights, from NOAA's space-weather number (called Kp), with a 3-day chart. A higher number means a better chance. Look north on a clear, dark night.

Aurora chance

Space station passes

## What can I do on the Rockets page?

It lists upcoming launches with a countdown. Tap one for details and a **Play liftoff** animation.

## What does the ISS page show?

The times the International Space Station flies over where you live and can be seen. If it says **None you can see in the next 2 days**, there is simply no good pass in that time.

## What are the alerts?

A card pops up (with a sound, if sound is on) when a launch is 10 minutes away, at liftoff, when the aurora chance is high, and for ISS passes. Tap the card to close it. Turn the sound off in Settings > Sound > Choose sounds > Space alerts.

## Where does the information come from?

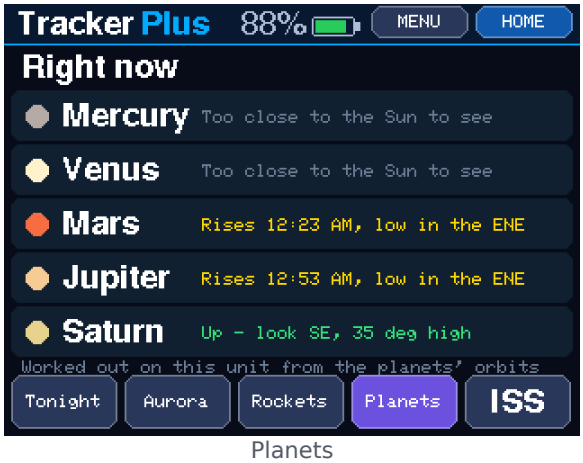

Free public services: NOAA (aurora), Launch Library 2 (rockets) and CelesTrak (space station). Nothing to pay.

## A page is empty.

Wait a minute and tap the page again. If it stays empty, run Settings > Self-test and check your Wi-Fi.

A launch in detail

Planets

## Need more help?

Open the full Tracker Plus guide from Settings > Help & info (scan the QR code), or contact the seller and tell them the version in Settings > Help & info.
